UHID	HNH-00012615	Visit No	2607-005462
Patient Name	Mrs NEHA KALANTRI	Visit Date	24-07-2026 05:09 PM
DOB / Age /	13-06-1994 / 32 Y 1 M 11 D / Female	Consultation	First Visit
Doctor Name	Dr. KADIYALA RAMYA THEJA		
Department	OBSTETRICS AND GYNECOLOGY		
Specialization			

Ht : 156.00 Cms Wt : 70.20 kg BSA : 1.70 BMI : 28.85 Kg/m2 Syt : 108.00 mm Hg Dia : 69.00 mm Hg

Chief Complaints :

G4P1L1A2/ 38+1 weeks/ prev LSCS/ mild anemia

No complaints

PFM well

H/O pain abdomen 3 days ago

Examination :

vitals normal

PA - relaxed, uterus term, cephalic, FHR 144/ min

PV - Cx long, posterior, os closed, Vx -3, outlet doubtful

Doctor Recommendations :

Option of TOLAC, pros and cons of TOLAC Vs Elective LSCS explained

Explained regarding the findings - need for Elective LSCS

plenty of oral fluids/ healthy diet/ physical activity

strict fetal kick count

Tab SOLFE EXTRA twice daily at 11am - 7pm till delivery

Tab SUPRACAL 2000 once daily at 2 pm till delivery

Tab SUPORT once daily at 2pm till delivery

VIVAMOM 2 spoons in 1glass of milk twice daily

Tab MEAXON PLUS once daily at 6pm for 3 months

Report to 4th floor if pain abdomen, bleeding PV, leaking PV, reduced fetal movements

Planned for Elective LSCS + Bilateral tubectomy on 29Th july (afternoon - time to be decided)

PAC today

NBM for 6 hours before procedure, clear liquids till 3-4 hours before surgery

Tab Dulcolax 2tabs at 10pm before night

Tab Pantop 40mg at 10pm before night

Report to 4th floor at 8am on 29.07.2026

Mean PI	0.54		13%				
---------	------	---	-----	--	--	--	--

Comment

Please note: All fetal anomalies cannot be detected by ultrasound alone. The pick up rate of abnormalities depend on gestational age of the fetus, fetal position, maternal habitus, tissue penetration of ultrasound waves and machine resolution. The results of the today's scan have been discussed with the parents. They were aware that ultrasound examination alone cannot exclude all genetic syndromes or chromosomal abnormalities. This report is not for medicolegal purposes.

Impression

There is a single viable intrauterine pregnancy.

The fetus is in cephalic presentation today .

Fetal growth, (EFW - 44 th centile)

Amniotic fluid (AFI - 19.1) is normal

Fetal Doppler and Uterine artery Doppler are normal.

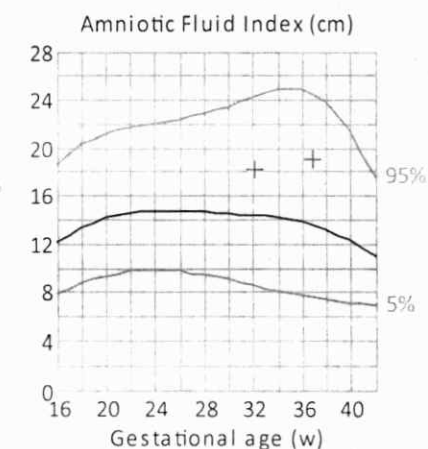

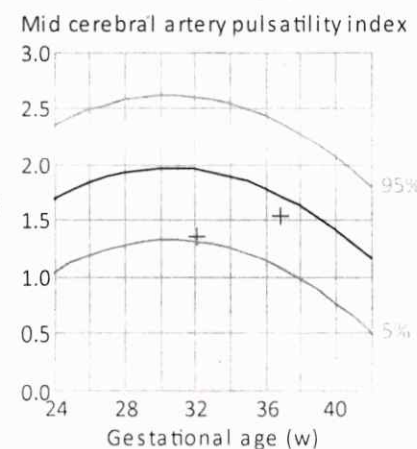

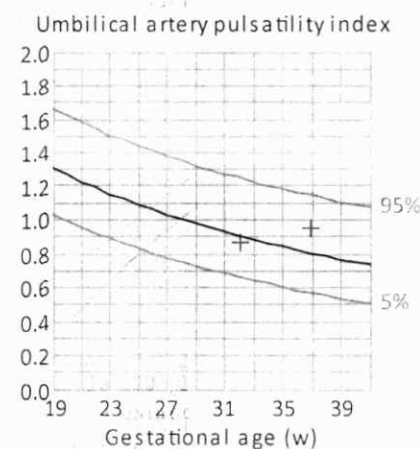

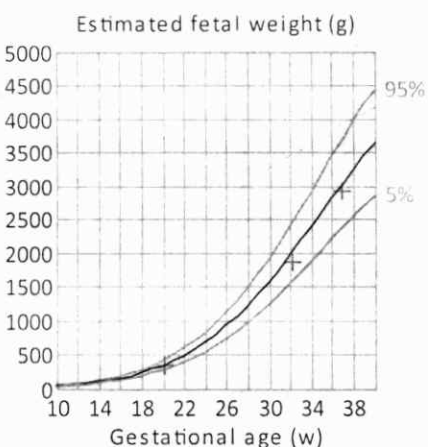

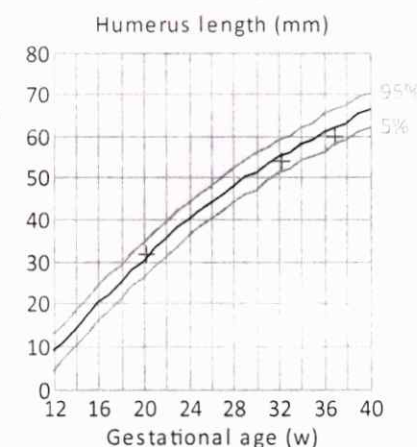

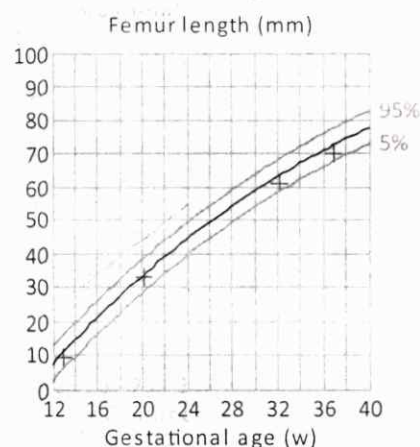

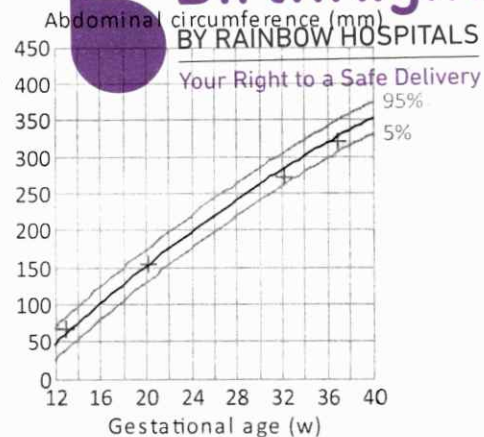

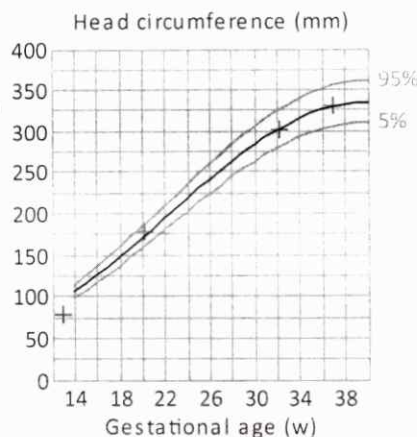

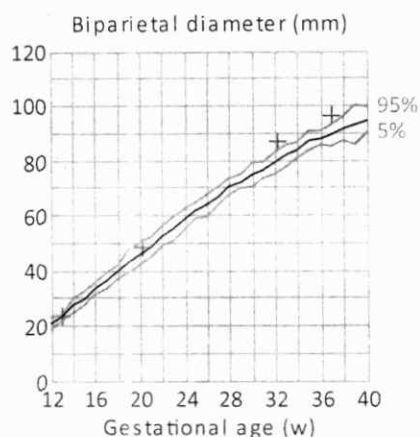

Detailed structural evaluation of fetus not possible due to advanced gestation and fetal position. All abnormalities cannot be excluded by ultrasound alone. Some abnormalities evolve as gestational age advances.

I, Dr. Mythreyi. K declare that while conducting ultrasonography / image scanning on Mrs. Neha, I have neither detected nor disclosed the sex of her fetus to any body in any manner.

Follow-up

Follow-up as clinically indicated
