Diagnosis: ACUTE CHOLECYSTITIS FOR FURTHER MANAGEMENT

History:
She presented with complain of pain in right upper abdomen since 4 am associated with nausea and vomitings - 2episode. Scan done on 08.07.2026 showed hepatomegaly with fatty liver, echogenic foci within gall bladder wall thickening and tenderness with probe pressure suggestive of calculus

Name	Mrs DEEPIKA AGARWAL	UHID	HNH-00016430
IP No	IP26-00006783	Admission Date	08-07-2026

cholecystitis. She was admitted with acute cholecystitis for further management.

LMP: 11.06.2026
Obstetric History : P1L1, Previous LSCS - 2021

Medical History: k/c/o cholelithiasis (gall stones since 5 years)- not on treatment), K/c/o hypothyroidism since 1 month- tab thyronorm 25mcg. K/c/o anxiety disorder- on medication 2 weeks back.
Surgical History: LSCS - 2021
Allergies: Nil
Family History: Mother- DM ; Father - HTN

Investigations: Enclosed
Blood Group: B positive

Management: On admission her vitals were stable. On per abdomen examination - diffuse tenderness noted more over right hypochondriac region. Physician and Surgeon opinion was sought. Investigation sent and traced. She was kept Nil by mouth. Conservative management was done with IV fluids, antibiotic and analgesic. MRCP done showed Multiple gallbladder calculi with a 14 mm impacted calculus in gall bladder neck. Diffuse gall bladder wall thickenening (~6mm) with mild pericholecytic inflammatory change. Imaging features suspicious for acute calculus cholecystitis with no evidence of choledocholilthiasis or biliary ducutal dilation with mild hepatomegaly and minimal reactive ascitis. Further Conservative management was done as per surgeon advice.

Advice:
1. Tab. Ceftum 500mg twice daily(9am-9pm) till 20.07.2026 after food.

					Date :	8/7	8/7	9/7	9/7
					Time :	2pm	N1	M6	E2
Mobility	**1. Completely immobile:** Does not make even slight changes in body or extremity position without assistance.	**2. Very limited:** Makes occasional slight changes in body or extremity position but unable to completely turn self independently.	**3. Slightly limited:** Makes frequent through slight changes in body or extremity position independently.	**4. No limitations:** Makes major and frequent changes in position without assistance.		4	4	4	4
"Activity The degree of physical activity"	**1. Bedfast :** Confined to bed	**2. Chairfast :** Ability to walk severely limited or non-existent. Cannot bear own weight and/or must be assisted into chair or wheelchair."	**3. Walks occasionally:** Walks occasionally during day, but for very short distances, with or without assistance. Spends majority of each shift in bed or chair.	**4. All patients too young to ambulate; OR walks frequently:** Walks outside the room at least twice a day and inside room at least once every 2 hours during walking hours.		4	4	4	4
Sensory Perception	**1. Completely limited:** Unresponsive (does not moan, flinch or grasp) to painful stimuli due to diminished level of consciousness or sedation, OR, limited ability to feel pain over most of the body surface.	**2. Very limited:** responds to only painful stimuli, cannot communicate discomfort except by moaning or restlessness; OR, has sensory impairment that limits the ability to feel pain or discomfort over half of body.	**3. Slightly limited:** Responds to verbal commands, but cannot always communicate discomfort or need to be turned; OR, has some sensory impairment that limits ability to feel pain, or discomfort in one or two extremities.	**4. No impairment:** Responds to verbal commands. Has no sensory deficit that would limit ability to feel or communicate pain or discomfort.		4	4	4	4
Moisture Degree to which skin is exposed to moisture	**1. Constantly moist:** Skin is kept moist almost constantly by perspiration, urine, drainage, etc. Dampness is detected every time patient is moved or turned.	**2. Very moist:** Skin is often, but not always, moist. Linen must be changed at least every 8 hours.	**3. Occasionally moist:** Skin is occasionally moist, requiring linen change every 12 hours.	**4. Rarely moist:** Skin is usually dry, routine diaper changes; linen only requires changing every 24 hours.		4	4	4	4
FRICTION-SHEAR **Friction** Occurs when Skin moves against support surfaces **Shear** Occurs when skin and adjacent bony surface slide across one another	**1. Significant problem:** Spasticity, contracture, itching, or agitation leads to almost constant thrashing and friction.	**2. Problem:** Requires moderate to maximum assistance in moving. Complete lifting without sliding against sheets is impossible. Frequently slides down in bed or chair, requiring frequent repositioning with maximum assistance.	**3. Potential problem:** Moves freely or requires minimum assistance. During a move, skin probably slides to some extent against sheets, chair, restraints, or other devices. Maintains relative good position in chair or bed most of the time but occasionally slides down.	**4. No apparent problem:** Able to completely lift patient during position change, moves in bed and in chair independently and has sufficient muscle strength to life up completely during move. Maintains good position in bed or chair at all times."		4	4	4	4
Nutritional Usual food intake pattern	**1. Very Poor:** NPO/or maintained on clear liquids, or IVs for more than 5 days OR albumin < 2.5 mg/dl OR never eats a complete meal. Rarely eats more than half of any food offered. Protein intake includes only 2 servings or meat or dairy products per day. Takes fluids poorly. Does not take a liquid dietary supplement.	**2. Inadequate:** Is on liquid diet or tube feedings/TPN, which provides inadequate calories and minerals for age OR albumin < 3 mg/dl OR rarely eats a complete meal and generally eats only about half of any food offered. Protein intake includes only 3 servings of meat or dairy products per day. Occasionally will take a dietary supplement.	**3. Adequate:** Is on tube feedings or TPN, which provide adequate calories and minerals for age OR eats over half of most meals. Eats a total of 4 servings of protein (meat, dairy products) each day. Occasionally will refuse a meal, but will usually take a supplement if offered.	**4. Excellent:** Is on a normal diet providing adequate calories for age. For example, eats most of every meal. Never refuses a meal. Usually eats a total of 4 or more servings of mean and dairy products. Occasionally eats between meals. Does not require supplementation.		4	4	4	4
Tissue Perfusion & Oxygenation	1. Extremely compromised: Hypotensive (MAP < 50 mm Hg; < 40 in a newborn) or the patient does not physiologically tolerate position changes.	2. Compromised: Normotensive oxygen saturation may be < 95%; hemoglobin may be < 10 mg/dl; capillary refill may be > 2 seconds; serum pH is < 7.40.	3. Adequate: Normotensive oxygen saturation may be < 95%; hemoglobin may be < 10 mg/dl; capillary refill may be 2 seconds; serum pH is normal.	4. Excellent: Normotensive, oxygen saturation > 95%; normal hgb; capillary refill < 2 seconds.		4	4	4	4
