Disclaimer

I Dr.K.Uma declare that while conducting ultrasonography/image scanning on this patient, I have neither detected nor disclosed the sex of her fetus to anybody in any manner.

All anomalies cannot be ruled out on ultrasound due to limitations, like amount of liquor, obesity, previous scar, advanced gestational age, fetal position, late appearance of few anomalies, multiple pregnancies and structures that are not part of routine imaging protocol.

Absence of anomaly on sonography does not absolutely rule out the possibility of having one.

for detailed evaluation of foetal heart, a separate fetal echo study is required.

This opinion is based on the imaging findings at the time of the scan and management decisions based on this report must consider the overall clinical setting and other relevant test results for this patient. Ultrasound findings are bound to change as the fetus develops.
